

SHIFT4 P2PE DEVICE:

Verifone MX 915

Shift4 Payments is proud to support True P2PE® with the Verifone MX 915 terminal. When properly implemented alongside our TrueTokenization® solution, True P2PE can greatly reduce your PCI burden and your risk of a data breach. The MX 915 is an EMV-ready, compact, multilane retail payment terminal with color touch-screen display.

- USB, Serial, or Ethernet Connectivity
- Optional Bluetooth Connectivity
- U.S. EMV Certified
- Backlit Keypad
- U.S. PIN Debit
- Magnetic Swipe Reader
- Customizable 4.3" Color Touch Screen

- Signature Capture
- Line Item Display
- Full-Motion Video
- Contactless/NFC
- Google Wallet Tap to Pay
- SRED Compliant

HOW TO ORDER:

- 1. Choose the Shift4-certified, PTS-validated POI device with SRED as a function that best suits the merchant's needs and works with their POS.
- 2. Select a Shift4-approved distributor on the next page to inject the Shift4 keys, then place the order.
- 3. Install the configured devices and contact Shift4 to go live with processing P2PE-secured payments.

Shift4 P2PE Device: Verifone MX 915

NOTE: While in most cases merchants may purchase these devices through their ISV or their merchant bank, the final order will be routed through a distributor listed below. To ensure the devices are properly configured, please provide the correct product numbers for hardware, configuration, and Shift4 P2PE keys when ordering.

^{*}Best Practice: Deploy an equal number of devices with each Shift4 P2PE key available for reduced risk and higher availability.

^{*}Important: There has been some confusion around the Shift4 configuration process regarding the requirement of a PIN encryption key, even if debit is not being utilized. Shift4 recommends that each Shift4 device being shipped automatically include a PIN encryption key along with the Shift4 P2PE key. If this is not included, there is a possibility that the devices will have to be returned for a PIN injection to utilize EMV functionality with Shift4. It is in the merchant's best interest to have an EMV PIN encryption key injected with the Shift4 P2PE key to avoid having to send the devices back and ensure they have the highest available liability protection in the eventual case of Chip+PIN.
